

SMART FACTORIES: STANDARDISE PROCESSES, STAY FLEXIBLE

In production, you look for efficiency through the standardization of your processes. At the same time, you strive for flexibility because markets ask for ongoing innovation and customers for individualized products. Thanks to the modular design of Asset Agent, you can permanently optimize your processes and remain flexible at the same time.

You have the freedom to select and integrate individual modules of Asset Agent independently, tailoring the solution to your specific requirements and preferences.

Whether you want to integrate automated and manual processes, need to apply a specific consumption sequence procedure like FEFO, or analyse your last day's operations, you need only one system to manage and execute all of your manual transportation tasks. Asset Agents' real-time data plays an important part in keeping your production on track.

BECAUSE IT WORKS

ASSET AGENT MODULES OVERVIEW

Point- based location module

Locate assets and mobile machinery in precise positions

Pick by light Modul

Identify assets visually and execute first in, first-out (FIFO) stock management

Automatic Identification module

Machines automatically identify and validate assets and deliver visual feedback to the operator

Zone-based location module

Locate assets and mobile machinery in pre-defined areas

GPS- based location module

Locate assets and mobile machinery in precise positions outdoors

“With an Industry 4.0 solution like Asset Agent we are able to stay on top of our competition in the market, by maximizing the use of our carriers and machines.”
