Transparency and clarity: we are reorganising our range of solutions

© IDENTEC SOLUTIONS *The new face of our Crew Companion software solution.*

Sophisticated technical solutions have allowed our clients from the Marine & Ports, Oil & Gas, Mining and Smart Factory industries the full transparency needed to keep on top of things in any situation for the past 20 years. This is a claim that we ourselves want to live up to, now more than ever before in our anniversary year. Over the coming months we will be revising and reorganising our range of products. One important part of this process is the standardisation of the names of IDENTEC SOLUTIONS' portfolio.

We are beginning with our four key solutions:

WATCHERPERSONNEL has become **Crew** Companion

WATCHERINDUSTRY has become **Asset** Agent

CTAS **Reefer** has become **Reefer** Runner

CTAS **PDS** has become **Terminal** Tracker

The IDENTEC SOLUTIONS' identifying, monitoring and locating solutions will guarantee more safety, greater transparency and efficiency in an industrial environment in future, with their proven quality and reliability, and in some cases with improved functions.
